CATHY BONFIG/Mustang Daily

Rebecca Olshausen is crowned in Chumash Auditorium as the 1984 Poly Royal Queen. Olshausen, a political science major who represented Young

Republicans at last year's pageant, will be doing the honors tonight for this year's Poly Royal spokeswoman.

## The search for Poly Royalty

By SANDRA THORNBURGH  
Staff Writer

The 1985 Poly Royal Queen will be chosen to represent Cal Poly and the Poly Royal Board at the annual pageant Tuesday, Feb. 5 at 8 p.m. in Chumash Auditorium.

The Queen will be selected from 46 women, who represent various professional, fraternal and cultural clubs, by a panel of six judges.

"Any girl sponsored by a club that is participating in Poly Royal can be a candidate," said Maureen Marks, director of the Queen's activities. In addition, candidates must be full-time students, with at least a junior standing and have an overall grade point average of 2.2, Marks said.

Although candidates will be judged on poise and general appearance, the pageant is basically a speaking contest, and selection of the Queen depends largely on how well candidates answer the questions posed by judges. Along with selecting a Queen, the women in the four runner-up positions will be designated as princesses and will serve as alternates to the queen if she is unable to fulfill her duties.

"Between now and Poly Royal," Marks said, "the queen's basic job is to represent the

board and to generate interest and community involvement in Poly Royal." In order to generate that interest, the queen will tour in Fresno and Bakersfield and visit various organizations in San Luis Obispo such as the Rotary Club and the Hacienda Care Center.

## Have compass, will travel

By T. WILLIAMS  
Staff Writer

Over wet ground, through patches of poison oak and being careful not to get snagged hopping over barbed wire, 50 competitors made their way through Poly Canyon on Saturday in the ROTC's sixth annual Orienteering Meet.

Orieentering involves using a compass and a contour map. Competitors are given maps with specific points marked on them. All of the points have corresponding markers in the field, each with a different hole punch. The contestant to locate each marker, correctly punch their scorecard and cross the finish line in the least amount of time is the winner.

But Saturday, the cadets ran the course in groups of two to four because of a shortage of compasses and some civilians,

The queen's pageant, which is free to the public, was revived two years ago after it was faded out during the 70s.

"It was a tradition for years at Cal Poly, and then in the early 70s it faded out because of a lack of interest," Marks explained.

utilizing the buddy-system, competed in groups also.

The meet began at 8 a.m. with about 35 ROTC cadets and 20 civilians competing. There were three courses: beginning, intermediate and advanced, but all ROTC cadets were required to do the advanced course. The differences between the courses were the number of points marked on each map and the distances of the courses.

The beginning course had five markers and was about two and a half miles long. The intermediate course was three miles long and had seven markers. The five-mile advanced course had nine markers.

Lt. Kari Knapp, the cadet in charge of organizing the meet, said the ROTC had a surveyor come out to help position the

## New fraternity joins the ranks of Poly Greeks

By MARGARET BARRETT  
Staff Writer

The presidents of the ten fraternities in the Interfraternity Council at Cal Poly voted Thursday night to allow one new fraternity into the council on a probationary basis.

Sigma Nu was named as a probationary house. Certain tasks must be performed before a final vote to allow the fraternity into IFC takes place in the spring. The requirements include sponsoring an all-Greek social and one philanthropic event as well as attending all IFC meetings.

Members of another fraternity, Beta Theta Pi, also hoped their house would be admitted into IFC. During the Thursday night meeting, a motion to allow both houses into IFC on a probationary basis did not pass. A second motion to allow one fraternity in was passed. Sigma Nu was voted in over Theta Beta Pi by one vote.

Walt Lambert, coordinator of Greek affairs, said the decision to choose between the two fraternities was a difficult one. He said he respected the presidents' decision, however. They took the matter of expansion seriously and took the time to get the opinions of their members.

"My personal opinion was I

thought they could take both," said Lambert. He said that he seriously assumes Beta Theta Pi will be allowed into IFC next fall.

The president of Sigma Nu, Dennis Klum, said he was surprised by the decision to only allow one house into the council. "I expected both of the fraternities to be accepted, and I'm hoping that the Betas are coming on by fall of this year."

Mike Pisenti, the president of IFC, said that the vote to admit only one house was much as he expected. "I'm glad that we got one in. I think the fraternity system needs to grow."

The president of Beta Theta Pi, Bruce Dankberg, said that men of his house were surprised and disappointed at the decision. He never thought of the question of expansion as being a matter of competition between Sigma Nu and his house. "The guys were concerned if we had done something wrong."

Dankberg said that he is talking to Lambert to better understand what the other fraternities want. Beta Theta Pi, however, will pursue its spring rush plans. Dankberg said a large number of undergraduate students have shown an interest in the house.

"We don't think this will alter us one bit," said Dankberg.

## Students help others as peer counselors

By KRISTIN RONCARATI  
Staff Writer

The Peer Counseling Program has served, in its first year, as a life line for students seeking summer and part-time employment opportunities.

Two Cal Poly juniors, Donna Quey and Kathy Kamiya, have worked as peer counselors for the program which began last fall.

Quey is a 20-year-old social science major with a concentration in human resource management, and Kamiya is a 20-year-old political science major. Quey said that as a result of being a peer counselor, she made the decision to change her major from dietetics.

Kamiya said that she heard about the position when it was advertised last Spring Quarter. She applied for the position because she wanted to work with people...to work as a guide and an information source. It seemed an interesting thing to do, rather than just going to school and taking classes.

Quey, Kamiya's roommate said that she heard about the job through the Summer Job Bulletin, a weekly publication that lists upcoming Placement Center activities and summer job descriptions. She said that Kamiya encouraged her to apply

for the job and has since found that the job allows her to "talk to people, to counsel them and provides a feeling for a professional setting."

Peer counselors serve as paraprofessionals who's job is to counsel students looking for summer or part-time work. Quey and Kamiya said that as counselors, they are responsible for talking to students, finding their interests, strengthening the students' communication skills. They also help students with job search strategies, such as resume writing, interviewing and cover letter construction.

Peer counselors serve as a liaison between employers and students. "We are the contact person for many companies," Kamiya said.

In addition to their counseling duties, peer counselors present seminars and workshops for residence hall students, student organizations and members of the Greek community. Kamiya said that they try to serve as "a mass outreach program to the students at large," through displays, advertising, posters and pamphlets.

Kamiya said that as counselors, she and Quey try to

Please see COUNSELING, page 3

# A noise ordinance in a college town?

Tonight a decision will be made that will affect all college students in San Luis Obispo.

Tonight at the City Council meeting a proposed noise ordinance will either be approved or rejected.

This noise ordinance, which establishes a particular level of noise that cannot be exceeded, is a form of control by the city to keep noise at a minimum.

Mayor Melanie Billig said in a previous *Mustang Daily* interview that the proposed measure was not anti-student.

If not students, what other group will be receiving a majority of the fines?

Billig said that the city is trying to deal with loud noises from the traffic of the highways, and general traffic in commercial, industrial and residential areas — not just loud parties. Will those trucks be pulled over and the driver given a fine? After all, even a car traveling at about 30 mph exceeds the 55 decibel level that proposedly is not to be exceeded.

The noise ordinance is supposed to be sensitive to the different concerns of young, middle-aged and older people. But, approximately half the population of San Luis Obispo is college-age students.

Even college students who are not "partiers" can be fined for getting too excited while playing trivial pursuit. Four college roommates in one apartment are bound to make more noise than Mr. and Mrs. Jones in their quiet residential home.

Steve Seybold of the San Luis Obispo Police Department said in the *Telegram-Tribune* that the city is not trying to come down on students. Yet, Mr. Seybold, <sup>2</sup>/<sub>3</sub> of police calls are in response to "loud" parties. Will the decibel meter be used in all cases?

Tonight will be the last chance for the community to voice its approval or disapproval of establishing a noise ordinance. The *Daily* encourages students to go to the City Council meeting at 7 p.m. and participate in the last public hearing before the proposal may become a law.

Some student groups have voiced their particular disapproval to the ordinance. For example, Linda Eberl, ASI community affairs representative, said at the last City Council meeting that the 55 decibel level is unreasonable for students. The Greeks are also worried that the ordinance may be directed unfairly toward their fraternity and sorority functions.

Perhaps the ordinance will pass. But, is 55 decibels a reasonable level of measure when several typewriters in a room register just around 55 decibels, and the *Mustang Daily* newsroom registers in

the "red" zone of a decibel meter? Where will the decibel readings be taken from — the street or the door of a party? Will the acceptable level of noise fluctuate during different times of the week, like on weekends?

These questions need to be considered, and students need to let the city know that they want fair treatment. The city says it is willing to listen to the voices of the students. The students have to show up at the meeting to be taken seriously.

Noise cannot be stopped. It is ridiculous for the city to think that it can keep a college town from having noisy students.

College students like to do more than study and work. They like to have fun, and — OK — sometimes that fun gets a little loud. Is that a reason to be penalized? We don't think so. What do you think? Let the city know.

## Reporter's Notebook

### A journalism major who doesn't know news

I'm a journalism major so people naturally assume I read the entire newspaper everyday and know what's going on in the world. Sure, I read the newspaper, the sports page and the comics. I can tell you who won the Laker game last night and what Norman Drabbe is up to, but ask me about Reagan's inaugural address and I'll tell you it's 1600 Pennsylvania Ave.

I thought the tobacco lobby was a room where people could smoke.

The Cold War was a snowball fight.

Constantin Chernenko was a ballet dancer.

The President's cabinet was where he kept his liquor.

The secretary of the Interior

was in charge of decorating the White House.

The First Lady was Eve.

The SALT talks were a seminar about reducing high blood pressure.

A Trident sub was Carefree sugarless gum.

The Electoral College was an engineering school in Oregon.

Arms buildup was done in the weightroom.

Reagan's domestic policy was insurance coverage for the White House.

A tax hike was a trip to the store for pins.

Congressional pages were found in books.

Reagan's press secretary ironed his shirts.

The state Supreme Court was where the Lakers play.

Reagan's state of the Union speech was about Rhode Island.

A coup was a place to keep chickens.

A government spokesman was a bureaucrat who rode his bike to work.

A diplomat was something you mounted your diploma on.

A good write-off was an essay contest.

A joint committee was a group of stoners passing one around.

An extradition was something you used to do in the good old days.

A summit meeting happened when you ran into a cute girl getting off the ski lift.

The Polish foreign minister

was Pope John Paul II.

A salary cap was something you wore on your head.

The attorney general was a defense lawyer at a court martial.

Revenue sharing meant you were giving the IRS half your paycheck.

Internal affairs meant the boss was fooling around with his secretary.

Jobless statistics were numbers that were out of work.

The Burger Court was a new fast-food restaurant.

An unfavorable trade balance was something that has plagued the Giants for years.

The military-industrial complex was a Lockheed factory.

The Tri-Lateral Commission

was the 49ers' new flea-flicker play.

Organized labor meant a pregnant woman using the Lamaze method.

Pluralism and capitalism were things you learned in grammar class.

Runaway inflation was something that happened to people who ate in the dining hall.

Social mobility was a euphemism for bar-hopping.

By the way, who is this Michael Jackson character anyway?

Author Andy Frokjer is a senior journalism major and has been offered a volleyball scholarship by the Baby Doc School of Medicine.

## HP executive to address Business Seminar

By SUSAN EDMONDSON  
Staff Writer

A top executive of Hewlett-Packard Company will be the keynote speaker at a luncheon for the 19th annual Cal Poly Business Seminar.

Dean O. Morton, executive vice president and chief operating officer of Hewlett Packard, will speak at noon on Tuesday, February 12 in Chumash Auditorium.

Tickets for the luncheon are \$7 and are on sale now through Friday in the lobby of the Business Administration and Education Building.

The luncheon on Tuesday will be the final event of a two-day business seminar sponsored by the Society for the Advancement of Management and the Business School.

The theme for this year's seminar is "New Horizons Through Communication."

Executives from 15 corporations will speak to a variety of classes in many departments and participate in panel discussions of topics such as marketing and finance.

At the luncheon, executives from Shell Oil, Lockheed, IBM, Chevron and other companies will sit at tables with six or seven students.

Craig Ryder, a senior business administration major and executive chair for the seminar, recommended that students buy their tickets early so they can sit with an executive of their choice.

Ryder was pleased to get Morton as keynote speaker for the luncheon and said that Morton was looking forward to the event.

"He is really excited about coming and also he seemed like a nice man, as far as being willing to do anything he can," Ryder said.

Morton serves as chairman of the Hewlett-Packard management council and is a member of the executive committee. He

received a bachelor's degree in electrical engineering at Kansas State University and a master's degree in business administration at Harvard University.

Morton joined Hewlett-Packard in 1960 as a marketing trainee. After several promotions he was named to oversee the company's operations in medical, analytical and component products in 1977.

Morton was elected 1984 chairman of the board of directors of the American Electronics Association. He assumed his present position at Hewlett-Packard in July 1984.

## No fund crisis, says foundation

By DONALD MUNRO  
Staff Writer

University Graphic Systems is not experiencing a financial crisis, the director of the Foundation said Friday.

Al Amaral said UGS actually ran a smaller deficit between July and December of last year than it did in the same period in 1983.

"I think the fiscal stability of UGS is excellent," said Amaral. "I'm really not concerned about the revenue problems they're having this year because I think it's a short-term problem."

Amaral was responding to an article in the Jan. 31 edition of *Mustang Daily* in which Lori DeMatteis, the student member of the Foundation board of directors, said that UGS is having financial problems because it spent too much on labor expenses in relationship to its revenue.

Actually, the short-term problems UGS is experiencing can be tied to the loss of the contract to print the alumni newsletter *Cal Poly Today*, said Amaral.

"Their revenue side has suffered the loss of the *Cal Poly Today* publication," he said. Because UGS is an operation that has high fixed expenses, the loss of a major contract means that costs stay high while revenues drop.

Amaral said that the loss of a major contract affects the relationship of labor costs to revenue, although UGS has made an attempt in past months to keep labor costs down.

In the Jan. 31 article DeMatteis said that UGS lost the *Cal Poly Today* contract because of mismanagement of labor expenses. Actually, the reverse is true, said Amaral — UGS is experiencing high labor costs in relation to revenue because it didn't receive the income from printing the newsletter.

When contacted by *Mustang Daily* over the weekend DeMatteis refused to comment on the matter.

Amaral explained that a major reason UGS didn't print *Cal Poly Today* this year was that it couldn't meet firm publication dates that didn't fit in with academic schedules. "I think the significant issue this year is the concern whether UGS could meet deadlines required on a timely basis."

The loss of the contract wasn't because UGS charged more for the job, he said. "I don't believe the cost difference was a significant factor," he said.

Amaral said that *Cal Poly Today* should be printed on campus, and that he will work to see that UGS can meet the strict publishing deadlines for next year.

When considering the overall UGS financial picture Amaral said that while it was experiencing minor problems it wasn't anything that couldn't be overcome.

"In recent years UGS has generated a satisfactory net operating income each year," he said. "We're still planning on generating a net income this year, if at all possible."

## COUNSELING

From page 1

help students develop a resume that will reflect the students' personal interests and capabilities. "There is no standard way to do a resume...we want to help the college student develop their resume into a 'personal' resume," Kamiya said.

The experience of being a peer counselor has aided both students in their own career interests. "It has enhanced my school career as to where I am going. It has given me more direction," Quey said. She also enjoys "helping other individuals meet their own potential."

The Placement Center will begin

recruiting for next years' peer counselors at the end of February and the beginning of March. The position requires a one year commitment, including enrollment in a three unit course during the spring quarter (ED 470). The course meets twice a week for 2.5 hours, and two components of Career Peer Counseling are addressed: Counseling Skills and Career Information.

Peer Counselors receive 2-3 units of academic credit a quarter. They are not paid. However, "the experience is really worth it," Kamiya said.

The position is constructed to work with the students' class

schedule. There are no prerequisites for the position, Quey said. "The students interest really helps."

Both Quey and Kamiya would like to give credit to the program coordinator, Jeanne Aceto, and their supervisor, Theresa Doodger. The girls said that Aceto and Doodger have allowed them to "have the freedom to establish ourselves as peer counselors...they have given us training but have let us go," Quey said.

"We try and help students find their gifts, and help them to achieve their goals," Quey concluded.

## ROTC

From page 1

markers to make the courses more difficult. "It's a bitch," she said, referring to the advanced course. "The markers are on the spot," Knapp said that although the advanced course was five miles long, it took about three hours to complete. "It's pretty rough terrain out there," she said.

Before competitors began the course, they were advised by Knapp to determine their pace counts. A pace count is how many steps are taken in a 100

meter distance. It is determined by counting every other step at full stride for 100 meters. Theoretically, the pace count can help you to determine distances between the markers and help project azimuths from point to point on the map.

But, when asked what the pace count actually does Knapp said, "Nothing—it's just good to know."

Knapp said the ROTC notified both the Boy Scouts and Cub Scouts of the meet and many of the civilian competitors were scouts. Todd Doughty, a Cub

Scout Spark, was the youngest participant at age six. His compass hung from his neck to the ground and when asked if he was going to win, he just nodded his head confidently. His 9-year-old brother Noah, a Bear Scout, nodded too.

Trophies were awarded to the top three finishers on each course and although Todd didn't do as well as he thought, Noah did — he won the beginning division. He was followed by the team of Erin Hamilton and Michael Donahoo and in third place was the team of Martin McClintock and Matt Booker.

MICHAEL MARTER/Mustang Daily

## Diablo Canyon bio lab

# Poly students hold in Diablo biology

By DONALD MUNRO  
Staff Writer

Biological sciences major Paul Dunn put the slide in position and adjusted the high-power microscope as the tiny marine animal he was examining came into focus.

The specimen was a sample of a side-gilled sea slug found off the coast of California. Dunn explained that a slug with almost identical characteristics is found off the coast of Australia, and he's working with an Australian professor for his senior project to find out if the creatures are in fact the same species.

It's an experiment that could be conducted in any biology lab, but Dunn works in a place that's unusual, to say the least. When he looks out the window he can see the twin reactors of the Diablo Canyon nuclear power plant across the way.

Dunn, along with other Cal Poly students, works for PG&E conducting biology experiments required by the Nuclear Regulatory Commission. PG&E has a contract with the Cal Poly Foundation to hire students to work in the lab.

"Everything that the students do in one way or another contributes to what PG&E is doing," said Dunn.

The lab is staffed by PG&E employees and consultants who work for the company's Department of Energy Research. They conduct experiments ranging from testing the effect of the hot water discharged from the plant on tiny sea creatures to monitoring the number of fish caught in the area.

PG&E is required by law to conduct such experiments to make sure the nuclear plant isn't having an adverse effect on the environment.

Besides working for PG&E, students like Dunn may use the facilities after hours to work on senior projects.

Senior biological sciences major Aaron Setran works as a research assistant for Tera Corporation, a consulting firm hired by PG&E. He is conducting experiments on four different species of limpets (a variety of marine snail) to find out how they are affected by hot water.

Setran explained that ocean water is piped in to cool the nuclear reactor. After a while, organisms settle in the pipes and build up, restricting the flow of water.

By raising the temperature of the water, Setran is trying to find out if the organisms can be killed and removed. "Our study is centered on the impact of the water coming out of the facility," he said.

Setran is enthusiastic about his job and the fact that he is gaining practical experience in conducting research experiments.

"It's one of the best things that's happened to me since I've been at Poly," he said.

A student who spends part of her time working at the lab but also works in the field is Sue Gibbs, a senior biological sciences major. Gibbs works on deep sea fishing boats out of Port San Luis monitoring the number of fish caught.

While on the boat she identifies each fish that is caught and figures the number caught per fisherman per hour. That way it can be determined if the number of fish caught is affected by the operation of the nuclear power plant, she said.

PG&E has been conducting such experiments for five years, Gibbs said, and has a good base line of data to compare the number of fish caught before and after the plant is in commercial operation.

# key job research

Although most students at the lab conduct biology experiments, one student is involved in engineering research for PG&E.

Lori Miller, a senior environmental engineering major, is conducting a surface heat transfer experiment which also doubles as her senior project.

"My ultimate objective is to find the heat transfer coefficient between the ocean and the atmosphere due to the thermal plume," she said.

The thermal plume is the heated discharge water which enters Diablo Cove. When Miller determines the coefficient it will be compiled into a numerical model which can be used to predict the pattern of the thermal plume under different weather conditions.

For example, when Miller is finished PG&E should be able to predict how heat is dissipated from the thermal plume when affected by different weather characteristics such as wind, tide, current and waves.

# CD majors get practical experience in labs

Freshman Ginger Westcott works with Tarrah Graves in the infant lab.

DEBBIE BALL/Mustang Daily

## Child center more than daycare

By WENDY WALTERS-BURGENER  
Staff Writer

In addition to providing a childcare program, the ASI Children's Center acts as a resource center for majors like construction, accounting, dietetics and architecture.

Although the primary purpose of the center is to provide a service for the student-parent population at Cal Poly, Yvonne

Ricketts, director of the children's center, said. "But, many students use us to fulfill their academic responsibilities such as senior projects, internships, design projects and labs."

At present the center has an accounting major who, for her senior project, is working on converting the center's present accounting system to a computerized one and a Dietetics intern who is responsible for planning the children's menu, cooking, and shopping. "As part of this

particular internship the student learns also to work within a non-profit budget," Ricketts said.

Future projects for the center include the redesigning of the pre-school playground by an architecture major, and repainting both the inside and outside of the building, by Zeta Tau Alpha sorority and Sigma Alpha Epsilon fraternity.

"Last year four construction majors remodeled the infant-toddler site for their senior project, and some interior design students did work here for an advanced interior design class."

In addition to the projects and internships, the children's center presently has 20 child development students fulfilling lab requirements by working with the children. They are learning how to be a head teacher by assessing child development.

"The students plan activities for the kids. Basically they do everything a teacher would do," Ricketts explained.

The Children's Center is staffed by a coordinator, pre-school

head teacher, pre-school assistant teacher, infant-toddler head teacher and nutritionist.

Other staff members include Cal Poly student assistants, work-study aides, child-development student teachers and community volunteers.

Because of the increasing demand for child care, the center is impacted and children are on a waiting list to get in. "At present over 100 are waiting. We are always full because we serve 36 children an hour," said Ricketts.

Parents who are students with a low income, or faculty, staff and student-parents who may be on the verge of abusing their child — or already have due to academic pressure — have first priority.

The basic philosophy of the children's center is to allow students who are also parents to be able to go to school.

"We want to help you through school by providing a quality service for you and your children so that you can feel comfortable, and finish your education," Ricketts said.

## Infants and toddlers get training

By DEBBIE BALL  
Staff Writer

Cal Poly child development majors have a chance to practice their skills and refine their techniques through infant and toddler programs.

The programs resemble pre-school settings, as parents drop their children off for the morning sessions. But according to Dr. Ned Schultz, infant program instructor, the "pre-schools" are actually training labs designed to allow students an opportunity to work on a one-to-one basis with children.

"We want the students to practice their basic skills of human interaction," Schultz said. "Here they experience direct contact with the children and parents."

"The primary purpose of the labs," he continued, "is to allow students to try different approaches to working with children, along with developing healthy and appropriate skills."

Dr. Bette Tryon, instructor of the toddler lab, agrees, saying the students get to experience a variety of situations when interacting with the children in the lab.

"They are responsible for planning activities each week and observing the children's actions. They then fill out self-evaluation forms and receive feedback from me," she explained.

Both instructors said the labs are beneficial to the children as well as the students.

Schultz said, "We try to emphasize activities that promote the children's social and psychological development. We want them to learn to trust human beings."

"Plus," he continued, "it is rare for a child in his first year to have contact with his peers."

Tryon said she promotes parental involvement in her program.

"We try to have good relationships between the parents, children and students," she added that she encourages students to make home visits and really get to know a child's family.

"And," Tryon added, "notes are sent home on a daily basis

instructing the parents on their child's progress."

Shelley Aleshire, a local resident and mother of 15-month-old Dana Aleshire, who is in the infant lab, said she thinks the program is great.

"I think it is really the most positive child care that exists, due to the high ratio of students to infants," she said. "I feel that so much more thought goes into it than at other centers."

Maria Delgado, a junior child develop major, said she enjoys working at the lab. "I think it's a good experience," she said. "I've never had a chance to work with infants before."

Tryon said she feels child development is a good major for those considering any profession that calls for interaction with people.

"I don't think people realize the great need and importance of having good communication skills."

## Congress asked to restrict team moves

WASHINGTON (AP) — Professional sports commissioners said Monday they want Congress to pass a no-frills bill that limits movement of professional teams among cities but stops short of telling leagues how to run their business.

The commissioners, testifying before the Senate Committee on Commerce, Science and Transportation, endorsed major provisions of a bill that would allow leagues to control team location. But they flatly rejected another measure that would give that power to a federal board.

"It is the leagues themselves, and not the federal government or a regulatory board, that are best suited to weigh the variety of competing considerations and balance the numerous relevant factors involved in a proposed relocation," said National Basketball Association Commissioner David J. Stern.

"What is needed is simply legislation that will enable pro-

fessional sports to make these judgments," Stern said.

Controversy over the moves of sports teams has arisen because some owners have relocated their teams despite league objections, and others are threatening to follow suit.

Last year, the NFL's Baltimore Colts moved to Indianapolis, and the NBA's San Diego Clippers moved to Los Angeles, both against the wishes of their leagues. This year, the NBA's Kansas City Kings have announced their intention to move to Sacramento, Calif., and the St. Louis Cardinals of the NFL are considering a move to another city.

Stern was joined by the commissioners of the National Football League, the Major Indoor Soccer League, the United States Football League, and a representative of Major League Baseball.

## Tennis player asks fans to donate for famine relief

MEMPHIS, Tenn. (AP) — Yannick Noah announced at court-side Sunday that part of his \$22,500 runner-up check from the U.S. National Indoor Tennis Championships would be donated

to African famine relief.

Then, in what one tournament official called the most moving thing he had ever seen in professional tennis, Noah asked the sell-out crowd of 4,600 to join him in helping Ethiopians and others who are starving because of a drought.

The crowd responded with cash donations of about \$6,500.

Later, Noah, a Frenchman who lives in New York, said he was somewhat hesitant about voicing his appeal, but decided to go ahead because of the need.

"We are in a very nice place, nice club ... a lot of people are wealthy," he said. "They just wait for the opportunity to help. I just wanted to give them the opportunity to do it."

Noah did not say how much of his check he would give to famine relief.

"I give a part of it," he said. "I don't give everything. I keep some for me, and my wife, and my baby who is coming."

## Rec Sports tournaments on Saturday

Racquetball singles and 8-ball billiards may be a crazy combination of events, but the tournaments are designed by Rec Sports to be fun break from homework.

Both tournaments will take place on Saturday on campus, said Dianna Cozzi, coordinator of special events. Racquetball will begin at 9 a.m. at the racquetball courts, and billiards will start at 10 a.m. in the Games Area of the University Union.

Prizes will be awarded to the winners. Sign-ups will be taken in the Rec Sports office, UU 119A, said Cozzi, and for any more information, call 546-1366.
